

# LUXURY

## OUTDOOR LIVING

---

Handcrafted in the Peak District National Park  
by our expert team using quality materials and  
time-honoured techniques.

# ABOUT US

**WELCOME** to luxury outdoor living the Sherwood way, where we specialise in designing and manufacturing stunning structures, hand-crafted in the heart of the Peak District National Park. Our team of skilled craftsmen and designers take great pride in producing quality products built to last.

At Sherwood, we understand that every outdoor space is unique, and so we offer a range of customisable options to meet your specific needs. From bespoke garden rooms and kitchens to luxurious diners and lounges, we have the expertise to create the perfect outdoor living space for you.

Selecting FSC certified Scandinavian Redwood we ensure that our materials are of the highest quality and sustainably sourced. With a choice of colours our upholstery is produced from marine-grade weather resistant fabrics, for a luxurious finish that withstands the elements.

With impeccable attention to detail, from concept through design, production, and installation, our team is committed to providing exceptional customer service and creating outdoor spaces that exceed your expectations.

# THE HUT

**TIMELESS** in design, The Hut is a classic outdoor space for preparing food, serving drinks and hosting guests.

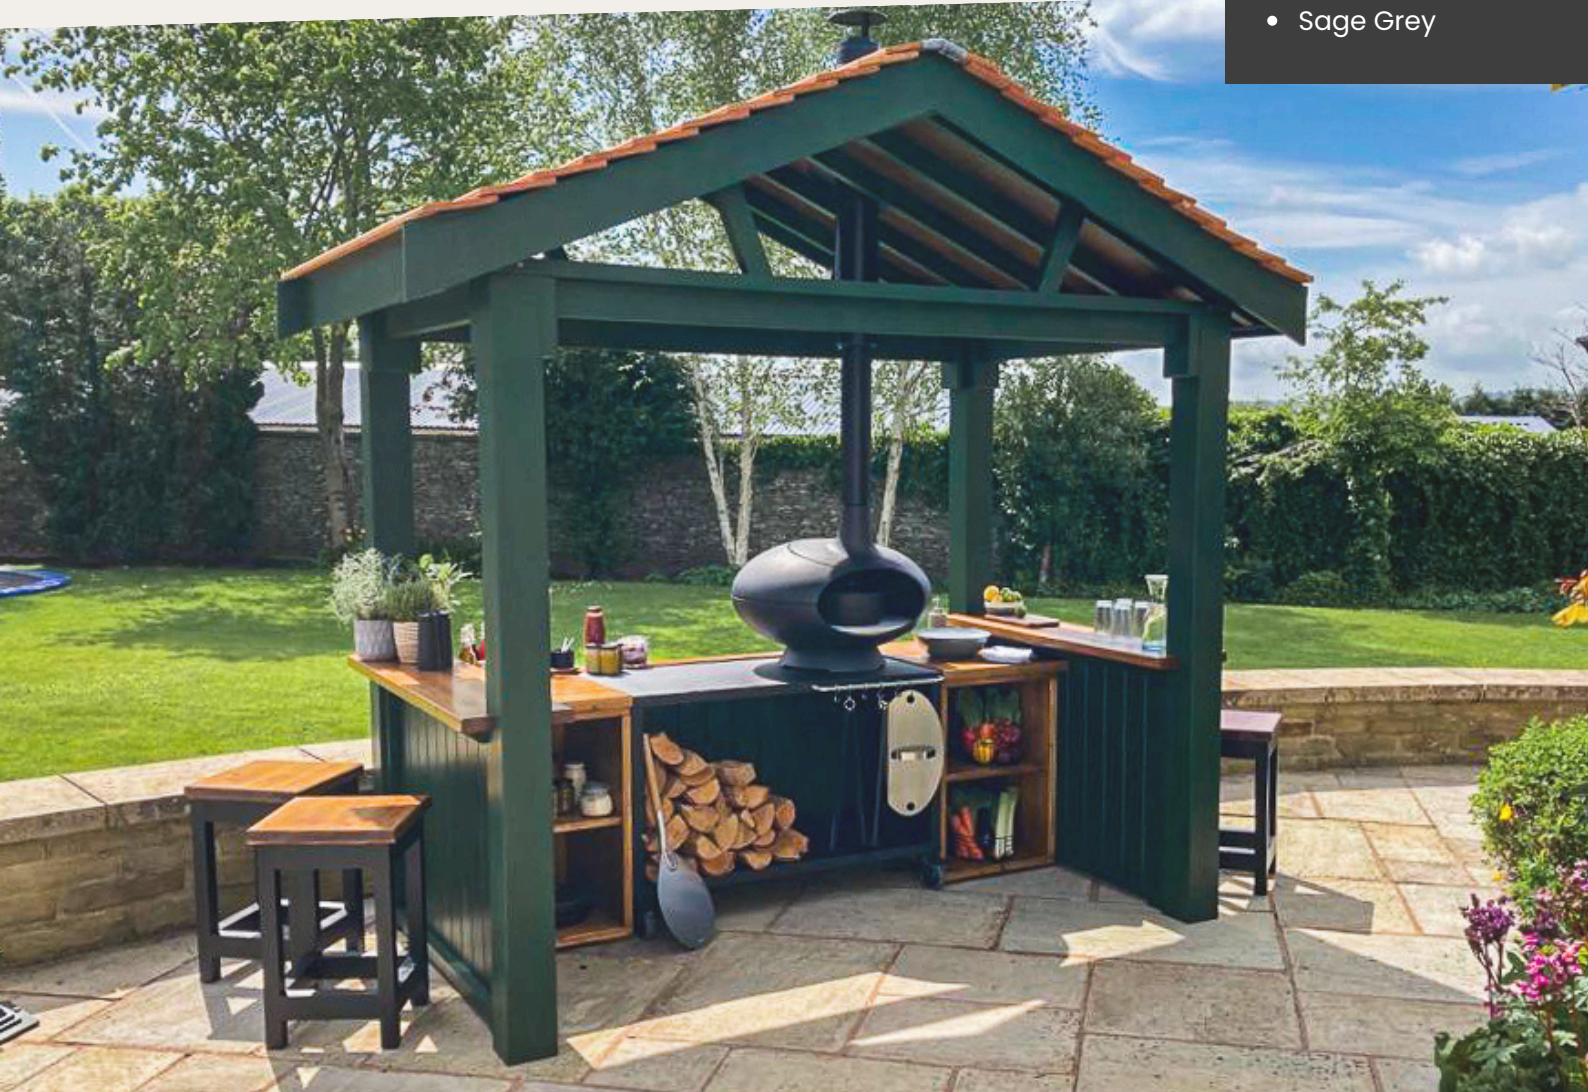

With the option of the Morso Forno package and ample storage space, The Hut is compact, without compromising on functionality, making it the perfect addition to your garden, patio or courtyard.

# WHAT YOU NEED TO KNOW

## Delivery and Installation

Our buildings have been designed so that planning permission should not be required in most cases. This remains the responsibility of the customer.

A minimum clearance of 24" (600mm) is required around the building to allow for fitting.

Clear access for delivery of materials and building sections is required for delivery of materials and building sections, maximum lift height 4ft (1200mm). If access is through the property you must inform us beforehand to allow for a pre-installation assessment.

*\*Installation over 100 miles from our workshop may be subject to an additional charge.*

## Base Prep

*(we recommend you consult a qualified contractor)*

All base work is the responsibility of the customer; we require a solid, level base either paving slabs, concrete or decking.

When constructing a base it is vital to ensure the edges can support upwards of 2 - 3 tonnes. The edges must not be chipped or crumbling.

The base may be constructed by forming a concrete slab. The poured concrete must sit on a layer of well-compacted hard-core and poured to a minimum depth of 100mm. We would recommend a depth of 150mm, depending on the composition of the concrete poured.

Alternatively, suitable concrete slabs may be used. Preparation for a slab base must include a good layer of compacted hard-core, a dressing of sharp sand and the slabs must be cemented in place.

Prior to base installation the ground must be level and free of all loose soil and debris.

It is essential that the base does not run out of level by more than 10mm end to end, is solid and with no possibility of slump or movement.

## Timber Care

Here at Sherwood, we take great pride in using only high quality sustainably sourced materials to create our range for you to enjoy for many years.

Our Scandinavian Redwood profiles and posts are pressure treated and finished using only the highest quality paints, varnishes and dyes. Where possible all our treatments are water-based to reduce their environmental impact, whilst still giving the highest levels of protection.

Our posts and handrails are installed on rubber pads and the building is erected using stainless steel hardware, to deliver a product that is both beautiful and durable.

Timber is a natural product impacted by seasonal weather and temperature changes which can be exacerbated under certain conditions. This could potentially lead to movement, twisting, warping, splits and cracks.

Timber is also subject to natural imperfections - small imperfections and natural variations will not affect the structural integrity of your building.

The Larch planks used on the roof will fade over time to a silvery, grey colour.

We recommend annual aftercare to help protect the wood and ensure it lasts longer. We therefore include an aftercare kit with every purchase for customer use.

You must ensure debris is not allowed to build up on the roof as this will hold moisture which can lead to premature wearing.

Prune back any vegetation that is in contact with the building as this can also act as a conduit for moisture.
